

XENIA

Brew-by-Sync

HOME ESPRESSO MACHINE

More in Every Shot.

Precision, control and intelligent support.
Made for home.

Made for Mastery. Confidence to Begin.

Xenia Brew-by-Sync is made for those who know espresso and want to take it further. Professional-level performance, precise control and live extraction data give experienced home baristas the freedom to explore variables, refine recipes and shape every extraction around their own preferences.

At the same time, Xenia makes the world of home espresso more approachable. Intelligent support and thoughtful automation simplify key steps, helping those who are new to home espresso build confidence from the start.

The fully integrated scale measures the espresso directly in the cup and automatically stops the extraction at the defined target weight. Connected with a compatible Mahlkönig Grind-by-Sync grinder, Xenia becomes part of one connected ecosystem built around your recipe. You define the target. The system supports you in reaching it and repeating it with confidence.

As your knowledge and ambitions grow, Xenia gives you the freedom to explore further and take more control.

Technology supports your craft.

For experienced home baristas, that means more possibilities to explore. For those just getting started, it means a more confident way into home espresso. And for everyone in between, it means a system that gives you room to grow.

Expect More. From Every Extraction.

One recipe. One connected system.

Xenia Brew-by-Sync brings brewing and grinding together around what matters most: your espresso recipe.

The integrated scale measures the result directly in the cup while Xenia Brew-by-Sync and a compatible Mahlkönig Home Grind-by-Sync grinder work toward the same target. You define the recipe and remain in control. Sync helps you return to it with confidence, cup after cup.

Easy to start. Yours to master.

Great espresso shouldn't depend on years of barista experience.

Xenia Brew-by-Sync combines professional-level control with intelligent support that makes espresso more approachable from the very first shot. The integrated scale and automated target-weight stop take care of key steps in the extraction, while the connected Grind-by-Sync ecosystem can provide additional support in reaching your recipe. And when you want to go further, Xenia gives you the control to fine-tune your espresso around your own preferences. Approachable for those getting started. Capable for those who want to go deeper.

Every shot. Right on target.

Xenia Brew-by-Sync measures what actually reaches your cup.

Instead of relying solely on the amount of water entering the brewing process, the fully integrated scale measures the extracted espresso directly in the cup and can stop the extraction when your defined target weight is reached. No additional scale. No manual stopping. Just greater confidence in repeating the espresso you intended to make.

Brew and steam. At the same time.

Pull your espresso while steaming milk — no need to wait for one process to finish before starting the next.

Xenia Brew-by-Sync uses separate brew and steam boilers, allowing both to operate independently and simultaneously. Dedicated temperature control across the brewing system, including the brew group, provides the thermal stability needed for precise and consistent extractions.

Your espresso. Your decisions.

Stay informed. Stay in control.

Xenia Brew-by-Sync keeps the key information of your extraction right where you need it — directly on the machine. Follow extraction time, beverage weight and flow rate in real time, without reaching for your phone. So you can stay focused on the coffee and the decisions that shape it.

German Engineering & Manufacturing.

Behind Xenia Brew-by-Sync is the same belief in precision that has shaped Mahlkönig for generations.

Developed and manufactured in Germany, Xenia Brew-by-Sync brings engineering, coffee expertise and purposeful design together in a machine made for the daily ritual at home. Every detail should serve the experience — because precision matters most when you can experience the difference in the cup.

Make Xenia yours.

Your espresso routine is personal. Your machine should be able to adapt to it.

The Sync App and Web Interface give you access to the settings behind your coffee and your daily workflow. Fine-tune temperatures, configure machine functions and adjust timers and energy settings to suit the way you use your machine.

More control when you want it, without adding complexity while you brew.

Steam power. Your way.

Choose the steam power that works for you.

Xenia Brew-by-Sync lets you adjust steam power through pressure rather than changing the temperature in the steam boiler. This gives you greater flexibility at the steam wand while maintaining stable steam performance and enabling fast reheating — ready for the next milk drink.

Technical Details

Power supply	230 V AC, 50/60 Hz
Protection class	I ⊕
Boiler type	Stainless steel dual boiler
Brew boiler capacity	0.3 l
Steam boiler capacity	1.2 l
Portafilter	58 mm, stainless steel
Water supply	Internal tank
Tank capacity	Max. 2 l
Dimensions (w x h x d)	27 x 37.2 x 43.5 cm
Net weight	25,6 kg
Gross weight	27,8 kg
Certifications	CE
Standard color	Matte black
