

Dial-in Guide

Sync Scale

Step 1: Dial-in the Grinder

- Adjust the grinder settings manually until your coffee machine's display shows your desired (target) brew time.

Step 2: Note the Scale Time

- As you brew, also record the time displayed on the scale.

Expect differences:

- Machine time is measured by the flowmeter.
- Scale time measures from the first to the last drop.

Step 3: Update Your Grinder Recipe

- Take the scale time you recorded and enter it into your grinder's recipe.
- This ensures your recipe reflects the real-world extraction measured by the scale.

Important Notes

- The machine and scale often show different times for the same shot — this is normal.
- To maintain consistency whilst you use sync, simply use the machine's displayed time to cross-check with your desired target.

*This is an example only. Actual values may vary for each brew event.
Brew times depend on your individual recipe and preparation method.
